

Hoteles Facilito
EASY HOLIDAYS

Problema

Queremos saber la probabilidad de que una reserva sea cancelada, así podemos hablar con el cliente y liberar esa habitación para que esté disponible cuanto antes.

ABSTRACT

This data article describes two datasets with hotel demand data. One of the hotels (H1) is a resort hotel and the other is a city hotel (H2). Both datasets share the same structure, with 31 variables describing the 40,060 observations of H1 and 79,330 observations of H2. Each observation represents a hotel booking. Both datasets comprehend bookings due to arrive between the 1st of July of 2015
